

Theodore by Frank Keating

If you've ever wanted to learn about the 26th president, then Theodore by Frank Keating is the book for you.

Theodore Roosevelt was born in New York on October 27, 1858. When he was 11, his father was his hunting partner. Later, in his twenties, Theodore wrote books about the Naval War of 1812, American heroes, and the painter Thomas Hart Benton. He wrote more than 30 books, which shows that he was very smart. He also fought in a war.

One of the reasons I like this biography is that there are so many great paintings—they make you feel like you are there with Theodore, his mother, and his father. You will like this book because it has many great facts about this amazing president.

A Drop of Water by Walter Wick

Have you ever thought about the dazzling beauty and delicate precision of a soap bubble? Well, if you read *A Drop of Water* by Walter Wick, you can learn many science experiments and amazing facts.

Let's talk about bubbles. You can put them in various shapes and they will take over every bit of space. Have you ever thought about making your own rainbow? If so, you're in luck. The book will show you what a rainbow looks like. It also shows you pictures of small particles of water.

You will enjoy this book because it has a lot of fun activities to try and facts that will amaze you.
